WARNING TO PARENTS: Covid Vaccines for children are dangerous!

JUNE 27, 2022 BY ADMINISTRATOR ([HTTPS://WWW.WESTONAPRICE.ORG/AUTHOR/ADMIN/](https://www.westonaprice.org/author/admin/))

 Print post

Dear Parents:

If you are contemplating giving Covid vaccines to your children, please read the following key points first. Here you will find that Covid vaccines are NOT safe and NOT effective.

THE PFIZER DATA

- Dr. Claire Craig, a diagnostic pathologist, analyzed the evidence that Pfizer just presented to the FDA on their vaccine for children ages six months to four years old. “There’s an awful lot about this trial that has shocked me, and I think will shock you,” she stated.
- The trial recruited 4,526 children aged six months to four years old. Three thousand of these children did not make it to the end of the trial. Why so many dropouts? Without an answer to that question, on that basis alone, the trial should be deemed null and void.
- The researchers defined “severe Covid” as children who had a slightly raised heart rate or a few more breaths per minute. There were six children, ages two to four, who had “severe Covid” in the vaccine group, but only one in the placebo group. On that basis, the likelihood that this vaccine is *causing* COVID is higher for those receiving the vaccine.
- One child in the trial was hospitalized with a fever and a seizure. That child had been vaccinated.
- In the three-week period between the first and second shot, thirty-four of the vaccinated

children got Covid compared to thirteen in the placebo group. But the researchers ignored that data.

- There were other cases of Covid in vaccinated children between the second and third dose, which the researchers also ignored. There were more cases in the vaccinated group after the third dose. In total, the researchers ignored 97 percent of Covid cases in vaccinated subjects that occurred during the trial.
- After eliminating most cases, they compared three children in the vaccine group who had Covid with seven in the placebo group, claiming that this proved that the vaccine was effective.
- Twelve children got Covid twice in the two-month follow up period. Eleven of them were vaccinated.
- The fact is that children under five are not at risk of serious injury or death from Covid. Therefore, the researchers had to invent other ways of measuring the problem because there was no serious injury or death from the illness.
- As for safety of the vaccine, they followed the subjects for only six weeks before unblinding the control group and vaccinating them. Consequently, [the control group for determining safety was wiped out \(https://canadahealthalliance.org/dr-clare-craig-exposes-how-pfizer-twisted-their-clinical-trial-data-for-young-children/\)](https://canadahealthalliance.org/dr-clare-craig-exposes-how-pfizer-twisted-their-clinical-trial-data-for-young-children/).

DANGERS OF COVID VACCINES FOR ALL AGES

- The Vaccine Safety Research Foundation (VSRF) [VSRF \(https://www.vacsafety.org/\)](https://www.vacsafety.org/) engaged the services of a professional polling company (Pollfish (<https://www.pollfish.com/>)) to survey 500 people who were selected entirely at random. The poll indicates that over twenty million Americans over eighteen have been seriously injured by the Covid vaccine such that they are unable to hold a job, and that [30 percent of households have at least one vaccine-injured person \(https://ussanews.com/2022/06/20/the-cdc-says-severe-reactions-to-the-covid-vaccines-are-rare-thats-not-what-the-survey-says/\)](https://ussanews.com/2022/06/20/the-cdc-says-severe-reactions-to-the-covid-vaccines-are-rare-thats-not-what-the-survey-says/).

- The Vaccine Adverse Event Reporting System indicates that Covid vaccines have injured over fifty thousand children (<https://www.survivethenews.com/vaers-covid-19-vaccines-have-injured-over-50000-children/>).
- A study published in the *New England Journal of Medicine* indicates that those who are vaccinated are more at risk of contracting Covid than those who are not (https://www.theepochtimes.com/vaccination-increases-risk-of-covid-19-but-infection-without-vaccination-gives-immunity-study_4544042.html?slsuccess=1).
- A study published in the journal *Andrology* indicates that Covid-19 vaccination temporarily impairs semen concentration and total motile count among semen donors (<https://pubmed.ncbi.nlm.nih.gov/35713410/>).
[<https://pubmed.ncbi.nlm.nih.gov/35713410/>]. The effect of the vaccine given to children on long-term fertility is unknown.
- A European database records almost 40,000 deaths and over three million injuries following Covid shots in Europe (<https://vaccineimpact.com/2022/38983-deaths-and-3530362-injuries-following-covid-shots-in-european-database-as-mass-funeral-for-children-who-died-after-pfizer-vaccine-held-in-switzerland/>).
- Hospital nurses are recording an increase of previously rare conditions (<https://tapnewswire.com/2022/06/nursing-reports-from-the-front-lines-is-reality-finally-creeping-in>) including Epstein Barr, brain abscesses, blood clotting including micro-clotting throughout the body, cardiac issues (endocarditis, myocarditis, and pericarditis) in individuals under the age of forty, toes and fingers turning black and blue from lack of blood flow, and numerous cases of shingles in heavily vaccinated populations.

A PHYSICIAN'S WARNINGS

- Dr. Syed Haider, a board-certified specialist in internal medicine warns parents: "Don't give this to your babies. You will regret it. . . This is the worst possible thing you can inject into them. You're injecting a poison into innocent babies."

· “It could affect their fertility, it could cause autoimmune diseases, it [could] cause cancer, it could cause heart disease ([//www.naturalnews.com/2022-06-23-doctors-begging-parents-spare-children-covid-vaccines.html](http://www.naturalnews.com/2022-06-23-doctors-begging-parents-spare-children-covid-vaccines.html)),” said Haider. “We know all of this already from the adult trials. We know the risks of these things.”

PARENTS! Your children are at low risk from contracting Covid-19, but are at high risk of injury and even death from the Covid vaccines.

PROTECT YOUR CHILDREN by saying NO to recently approved Covid vaccines for young children.

PLEASE share this email with family, friends and colleagues.
